EXAMPLES AND INSTRUCTIONS FOR LAYING METHODS

- Choose the profile of the required finish, if necessary cut the TOP in the required length.
- Clean, remove the grease and dry the substrate: the temperature should be at least of 15° C.
- Fixing with biadhesive tape:** Remove the paper protection from the adhesive and lay the TOP with a vertical pressure without moving the profile.
- Fixing with screw anchors:** Drill the substrate with a 6 mm bit, 5 holes per linear meter. Remove the paper protection from the adhesive. Insert the screw anchors in the profile dovetail groove. Beat with a rubber/pvc hammer to insert the screw anchors into the holes.
- Fixing of the aluminium flatten down base:** Cut the flatten down base to the requested length. Remove the paper protection from the adhesive. Insert the base into the profile groove dovetail, then fix or glue the base to the floor. Make a uniform pressure on the profile with the hands or a rubber hammer.
- Perimetric laying:** Remove the paper protection from the adhesive. Cut the perimetric pins according to the thickness of the floor. Insert the perimetric pins into the profile groove dovetail using 4 supports per linear meter. Fix the profil making a uniform pressure on the profile with the hands, but do not move the profile.

One fixing kit is composed of: 5 screws, 4 perimetric pins, 2 joints
